

Clone Power Project work

Project Background

Endive Software is the second name of passion, hard work and innovation. In order to gear up with the nimble technology and accommodate with the daily rising demand of users, We keep doing extensive research and development work, that ultimately results in a highly efficient tool with the amazing functionality and impressive capabilities. Our tools are entirely oriented for morphing the sideways to infuse the superlative level of functionality and forestall the critical situation in operating the off-the-shelf tools. Our futuristic approach of development and engineering is entirely oriented to ease out the problem of managers. Digging out the solution of bottleneck situations is our passion and resolving the out of the box strategy is our aim of development. The perfect amalgamation of our strategy with passion results in the enhancement of technological ease to the users leveraging the management.

Project Challenges

The standard Salesforce solution lacks in some features owing to the generalization approach used by the solution provider. The standard features of Salesforce are effectively constructed to cope up with every sort of businesses, where the sporadic requirements are left insatiated sometimes. Cloning the object is one of them. Further, many times it is required to perform operations over standard and custom sObjects such as performing Mass Cloning over multiple records. Besides, several times, user wishes to delete unused and waste records. For these sort of sporadic needs, user requires the powerful cloning and deletion tool that can perform the operation safely, depending upon the specified criteria. The most viable needs are:

- Cloning of specific record
- Mass Cloning of multiple records
- Safe Deletion of records

Project Solutions

Clone Power is the powerful tool for Salesforce users. The tool is aimed to enhance the functionality and resolve common occurring problems. Many of the time, users get stuck with the lack of feasibility in cloning the objects and performing the same manipulation of multiple objects. The new unique tool, Clone Power is the efficient tool that allows a user to perform an operation over standard and custom sObjects. This amazing tool gives the functionality to clone sObject and performs the mass cloning of sObject along with its child records. The cloning process takes place at the backend utilizing the batch process. This enables a user to enhance its power with amazing app associated with the tool. The features of Clone Power App can be segmented into three sections:

- **Deep Clone:** Deep Clone is the feature that leverages the functionality of cloning the specific record. The Deep Clone feature can be attached to any of the desired object. As the user clicks over the featured button, the popup reveals the list of sObjects along with the relevant child records, where a user can select specific sObject to be cloned along with its parent sObject. This way, Deep Clone empowers the cloning of sObjects in more efficient manner.
- **Mass Clone:** Mass Clone is the unique feature, that facilitates the operation over multiple records at the same time. Here, a user can select the multiple records and clone them all. The acknowledgement message after the operation confirms the cloning of desired sObjects.
- **Mass Delete:** Mass Delete facilitates the safe deletion of the records. A user is rendered the features to select multiple records of any sObject and delete them at the same time. It is the robust tool which also prevents the deletion of records, that are internally associated with other records. Here the association of records depend upon the criteria set while defining the relationships. Here also, the acknowledgement message confirms the deletion of desired records and provides the count for verifying the successful as well as unsuccessful deletions.

Mass Cloning and Mass Delete allows a user to view the records depending upon the selected sObject and its fields as a table having checkbox to select multiple records.

Unlike off-the-shelf tools, Clone Power is the perfect tool for performing the safe record deletion and cloning with the motive of easing out the manipulations for user. A safe and secure approach to deletion and cloning of sObjects saves the time along with making information & data management feasible.
